Allstate

Re: Business Intelligence and Data Analytics Consultant II – Remote

I am excited to apply for the Business Intelligence and Data Analytics Consultant II position at Allstate. Having spent a significant portion of my career — including time directly at National General (an Allstate company) reporting to the Chief Actuary — I bring deep insurance domain expertise in loss triangles, loss ratios, reserving, pricing models, and regulatory reporting, combined with strong technical skills in SAS, SQL, Python, Power BI, and big data platforms. Allstate's data-driven culture and scale make this an especially compelling opportunity.

Over 15+ years, I have consistently delivered business intelligence and analytics solutions that drive real decisions: building ETL pipelines and dashboards for actuarial and compliance teams, creating deployed predictive models (including a logistic regression auto risk scorer), reconciling data with general ledgers for SEC filings, and writing complex SQL across Oracle, Teradata, Snowflake, and Hadoop environments. At Wells Fargo, I served as the go-to technical resource for challenging data questions and was recognized with a full-time offer upon project completion. I thrive in environments where data quality, regulatory accuracy, and clear communication of insights all matter.

I took a brief break from work for health reasons and am now fully ready and genuinely excited to bring my skills and experience back to a high-impact team like Allstate's.

I would welcome the opportunity to discuss how my background in insurance analytics, SAS/SQL/Python development, and BI reporting can contribute to Allstate's continued success. Thank you for your time and consideration.

Sincerely,

José R. Sousa
