Boomi

Re: Senior Data Engineer – Agentic AI Engineering

I am excited to apply for the Senior Data Engineer – Agentic AI Engineering role at Boomi. With over 15 years of experience building large-scale data platforms, ETL pipelines, and predictive models across insurance and banking, I am confident in my ability to architect the reliable, observable data infrastructure that powers Boomi's LLM-based agentic systems.

Throughout my career at Wells Fargo, AIG, Florida Blue, and others, I have designed and operated complex batch and real-time data pipelines using Python, SQL, SAS, Snowflake, PySpark, Databricks, Hadoop, and multiple cloud environments. I have implemented data governance frameworks with PII controls, lineage tracking, and rigorous quality validation — exactly the kind of enterprise-grade data foundation that Boomi's AI platform requires. I have also worked hands-on with Gen AI orchestration tools (n8n), RAG concepts, REST APIs, and vector data workflows, and I have deployed a logistic regression scoring model into production, bridging research-stage prototypes and production reliability.

I took a brief break from work for health reasons and am now fully ready and excited to return — energized by the opportunity to contribute to a fast-moving, AI-forward company like Boomi.

I would welcome the chance to discuss how my data engineering background and passion for AI infrastructure can help Boomi scale its agentic platform. Thank you for your time and consideration.

Sincerely,

José R. Sousa
