Cohere

Re: Lead Data Scientist

I am writing to express my strong interest in the Lead Data Scientist role at Cohere. With 15+ years of experience in statistical modeling, predictive analytics, and data science across insurance, banking, and healthcare, I am excited by the opportunity to help define how the world's leading enterprises adopt and benefit from foundational AI. Cohere's mission — building security-first, production-ready AI for real business problems — is exactly the kind of challenge I want to work on.

Throughout my career, I have owned the full analytical lifecycle: framing ambiguous business questions, designing and executing experiments, building propensity scoring and segmentation models, and communicating results to senior leadership in ways that drive decisions. At Wells Fargo, I built population identification frameworks for large-scale regulatory remediations that were presented directly to senior directors for approval. At National General (Allstate), I independently developed and deployed a logistic regression risk-scoring model for auto policyholders. I have deep expertise in SQL, Python, SAS, and big data platforms (Snowflake, Databricks, Hadoop), and I stay actively engaged with AI developments — including building Gen AI automation workflows using n8n and the Anthropic API.

I took a brief break from work for health reasons and am now fully ready and genuinely excited to return. I am energized by the prospect of contributing to a team that is building the infrastructure powering the next generation of enterprise AI.

I would love the opportunity to discuss how my background in analytical leadership, statistical rigor, and AI enthusiasm aligns with what Cohere is building. Thank you for your time and consideration — I look forward to connecting.

Sincerely,

José R. Sousa
