SUMMARY

Data Scientist with 15+ years of experience turning complex data into strategic insights across insurance, banking, and healthcare. Expert in SQL, SAS, and Python with hands-on experience in distributed data systems (Snowflake, Hadoop/Hive, Databricks, PySpark), statistical modeling, and experimentation. Proven track record of collaborating cross-functionally with Product, Finance, Marketing, and Compliance stakeholders to deliver end-to-end data projects—from problem scoping and data engineering to predictive modeling and executive-level reporting. Strong foundation in statistical methods, logistic regression, and machine learning; M.S. and B.S. in Statistics from the University of São Paulo.

CORE SKILLS

SQL (Teradata, Oracle, SQL Server, Snowflake, DB2) | Python (pandas, scikit-learn, PySpark ML, openpyxl, REST APIs) | SAS (BASE, STAT, GRAPH, Macro, Proc Report, Stored Processes, Enterprise Guide, Viya) | Distributed Data Systems: Snowflake, Databricks, Apache Spark / PySpark, Hadoop, Dremio, Hive | Statistical Modeling: Logistic Regression, GLM, Forecasting, Loss Triangles, Experimentation | BI & Visualization: Power BI, SAS/GRAPH | Cloud: AWS, Azure, GCP (working knowledge) | Other: Git, GitHub, Jira, Excel/VBA, XML, JSON, RegEx

EXPERIENCE

Senior Data Analyst (Contract, Remote/Hybrid) — Wells Fargo

10/2022 – 12/2025

Remote / Charlotte, NC

- Owned end-to-end data projects for AML / Financial Crimes remediations (CIP, KYC, CDD), from population scoping to final artifact delivery used by regulators to issue customer refunds.
- Built complex, optimized SQL queries against Hadoop (Dremio/Hive), Teradata, Oracle, SQL Server, and DB2 to identify and extract remediation populations; served as go-to resource for challenging technical data questions.
- Created waterfall charts and population identification workbooks and presented findings to senior directors, translating complex data into clear business narratives.
- Managed and enhanced SAS ETL pipelines to generate final remediation artifacts, reducing defects and improving performance; added automation to back up prior analyst work on project handoffs.
- Created ad-hoc, time-sensitive data extracts and reports under strict compliance deadlines; authored code test scripts and collaborated with testers to validate results.
- Recognized with a full-time offer upon project completion.

Data Analytics – SQL/Python (Contract, Remote) – Truist

09/2021 – 03/2022

Charlotte, NC (Remote)

- Ran SQL queries in Snowflake to extract and analyze data from the enterprise data lake/data warehouse.
- Built a rules-based decision tool in Python (web form) enabling compliance and data analysts to select optimal analytics applications, improving self-service data access.
- Conducted reconciliation between ServiceNow/RITM and mainframe data to validate an automated ticket-creation process; summarized findings in executive PowerPoint presentations.
- Generated compliance access reports for AD and ACL systems and produced SAS Grid reports following internal documentation standards.

SAS/Python Developer (Contract, Remote) – Florida Blue

04/2020 – 08/2021

Jacksonville, FL (Remote)

- Developed ETL pipelines in SAS 9.4 (AIX/Unix) and Enterprise Guide to extract and integrate data from Oracle, DB2, and other sources for downstream analytics.
- Built agent fraud detection analytics for the SIU department—extracting multi-source data, computing behavioral metrics, and automating formatted Proc Report outputs with SAS macros.
- Automated and scheduled SAS ETL jobs in Unix; automated file transfers between platforms via SFTP using combined Windows batch, WinSCP, and VBScript.
- Created visualizations and reports in Power BI and Python; trained team members on designing SAS stored processes.

Insurance Data Programmer / Data Manager – National General (Allstate)

04/2015 – 12/2019

New York, NY

- Reported to the holding company's Chief Actuary; served as the primary data resource for actuarial analyses, reserving, and regulatory reporting.
- Independently built and deployed a logistic regression scoring model for auto policyholder risk; the model was deployed into production.
- Created actuarial loss triangles with SAS macros to estimate ultimate claims (LDFs) and reconciled results against the Oracle general ledger.
- Produced quarterly company-wide YTD summary reports in Excel from Oracle BI Discoverer data to support SEC filings (10-K, 10-Q).
- Ran statistical analyses to track product performance; extracted data for consultants, auditors, and regulators.

Data Scientist / SAS Programmer (Contract & FTE) – AIG

12/2011 – 12/2014

New York, NY

- Designed and built ETL pipelines extracting data from IBM mainframe (VSAM), DB2, SQL Server, and Oracle into SAS for the Global Actuarial Pricing department.
- Created SAS macros generating a wide variety of loss triangles for LDF derivation and ultimate claims estimation.
- Developed a smart policy-linking algorithm in SAS that became the data foundation for the AQI (Account Quality Index) scoring model.
- Collaborated with Deloitte consultants on Commercial Auto and Specialty Workers' Comp pricing models, delivering SAS code, data, and predictive model results.
- Worked on deep-dive profitability analyses, extracting loss, premium, and policy attributes to produce performance metrics across lines of business.

Senior Data Analyst (Contractor & FTE) — Aviva Canada

05/2008 – 12/2010

Toronto, ON

- Independently designed SAS stored processes to automate loss ratio reports with a user-friendly GUI, enabling self-service reporting for actuarial stakeholders.
- Planned and provided policy/claims data (with accurate match) used by EEA consultants to develop risk and pricing models.
- Wrote SAS code to reconcile monthly actuarial data loads and created comprehensive HTML/VBA documentation on data tables, variables, and processes.

EDUCATION

Master's in Statistics — University of São Paulo, Brazil

Bachelor's in Statistics — University of São Paulo, Brazil

Bachelor's in Mathematics — University of São Paulo, Brazil
