Prog Leasing

Re: Data Scientist (Remote)

I am writing to express my strong interest in the Data Scientist role at Prog Leasing. With over 15 years of experience in predictive modeling, machine learning, and advanced analytics — primarily in financial services and insurance — I am confident I can contribute meaningfully to Prog Leasing's data-driven decision-making and risk-assessment capabilities.

Throughout my career I have independently built and deployed risk-scoring models using logistic regression and GLMs, produced pricing and profitability analyses in partnership with leading consultancies, and engineered large-scale ETL pipelines across platforms such as Snowflake, Hadoop, Databricks, Oracle, Teradata, and SQL Server. My technical toolkit spans Python (PySpark ML, pandas, scikit-learn), SAS (macros, stored processes, Proc Report), and SQL, and I have hands-on experience with cloud environments on AWS, Azure, and GCP. I also hold graduate and undergraduate degrees in Statistics and Mathematics from the University of São Paulo, which grounds my modeling work in rigorous quantitative theory.

I took a brief break from work for health reasons and am now fully ready and genuinely excited to return — bringing renewed energy and focus to a team where data science directly impacts customers and business outcomes. Prog Leasing's mission of providing accessible lease-to-own solutions and its data-centric culture make it exactly the kind of organization where I want to contribute.

I would welcome the opportunity to discuss how my background in risk modeling, insurance analytics, and big data engineering aligns with your team's goals. Thank you for your consideration, and I look forward to speaking with you.

Sincerely,

José R. Sousa
