SUMMARY

Data Scientist and Senior Data Analyst with 15+ years of experience in insurance, banking, and healthcare. Strong expertise in predictive modeling (logistic regression, GLM), machine learning, SQL, SAS, Python, and Big Data platforms including Snowflake, Databricks, and PySpark. Proven track record independently building and deploying risk-scoring models, ETL pipelines, and advanced analytics solutions. Degrees in Statistics and Mathematics from the University of São Paulo.

CORE SKILLS

Languages & Tools: Python (pandas, openpyxl, scikit-learn, PySpark ML), SAS (BASE, STAT, GRAPH, Macros, Stored Processes, Proc Report, Enterprise Guide, Viya), SQL, VBA, Unix/Windows scripting | Databases: Oracle, Teradata, SQL Server, DB2, Snowflake | Big Data: Databricks, PySpark, Hadoop, Dremio, Hive | Cloud: AWS, Azure, GCP (working knowledge) | BI & Visualization: Power BI, SAS/GRAPH | Other: Git, Jira, RegEx, XML, JSON, Excel (advanced), n8n (Gen AI workflows)

EXPERIENCE

Senior Data Analyst (Contract, Remote/Hybrid) — Wells Fargo

10/2022 – 12/2025

Remote / Charlotte, NC

- Wrote complex, optimized SQL queries to extract and analyze large datasets from Hadoop (Dremio/Hive), Teradata, Oracle, SQL Server, and DB2; served as the go-to resource for challenging technical queries.
- Built AML/Financial Crimes remediation populations (Trust, NRM4, transportation assets) and developed SAS and SQL code for time-sensitive data extracts and ad-hoc analytics.
- Created population identification workbooks and waterfall charts and presented findings to senior directors for approval.
- Managed and enhanced SAS ETL pipelines that produced final remediation artifacts; reduced defects and findings through code optimization and automated backup logic.
- Authored code test scripts and collaborated with QA testers to validate analytical outputs; recognized with a full-time offer at project completion.

Data Analytics – SQL/Python (Contract, Remote) — Truist

09/2021 – 03/2022

Remote / Charlotte, NC

- Ran SQL queries in Snowflake to extract and analyze data from the enterprise data lake/warehouse.
- Built a rules-based decision tool in Python (web form) to guide compliance and data analysts toward the optimal analytics application.
- Produced reconciliation analysis between ServiceNow/RITM and mainframe data to assess ticket-automation accuracy; summarized findings in PowerPoint.
- Created compliance reports on user accesses across proprietary applications (AD, ACL) and produced SAS Grid reports following internal templates.

SAS/Python Developer (Contract, Remote) — Florida Blue

04/2020 – 08/2021

Remote / Jacksonville, FL

- Developed ETL pipelines in SAS 9.4 on AIX/Unix to extract and transform data from Oracle and DB2 for fraud detection analytics in the SIU department.
- Created agent fraud detection metrics and automated report formatting using SAS Proc Report macros; built visualizations in Power BI and Python.
- Automated and scheduled SAS batch jobs in Unix; composed rich-text email alerts with HTML syntax in SAS.
- Designed SAS stored processes for canned reports and trained team members on stored process architecture and user-input handling.

Insurance Data Programmer / Data Manager — National General (Allstate)

04/2015 – 12/2019

New York, NY

- Independently designed and deployed a logistic regression model to score auto policyholder risk; model was put into production.
- Created a GLM to predict bare land value of properties in Orange County, CA.
- Planned and built SAS datasets by combining data from Oracle and SQL Server, producing loss triangles and actuarial analytics used in reserving and pricing.
- Created quarterly company-wide YTD Excel summary reports using Oracle GL data (with array formulas) supporting 10-Q and 10-K filings.
- Ran statistical analyses to track product performance; collaborated with consultants, auditors, and regulators on data requests.

Data Scientist / SAS Programmer (Contract & FTE) — AIG

12/2011 – 12/2014

New York, NY

- Worked with Deloitte on the Commercial Auto pricing tool and Specialty Workers' Comp predictive model, delivering SAS code, data, and model results.
- Created a smart policy-linking algorithm in SAS that became the foundation of the AQI (Account Quality Index) scoring model.
- Built ETLs to extract data from mainframe (VB/VSAM), DB2, SQL Server, and Oracle into SAS; these tables served as the data foundation for Global Actuarial Pricing.
- Wrote SAS macros to produce loss triangles (LDFs, ultimate claims estimates) and conducted deep-divide profitability analyses across multiple lines of business.

Data Analyst (Contract) — Capital One

01/2011 – 11/2011

Toronto, ON

- Supported AML/KYC/CDD initiatives using Excel/VBA and PowerPoint; created ETL jobs in SAS and Teradata for daily vendor files.
- Built an advanced SAS/GRAPH dashboard running weekly on Unix to monitor web performance and distributed it to a standing distribution list.
- Automated customer bookings reporting with SAS Proc Report and built Excel/VBA workbooks that retrieved Teradata data and populated PowerPoint decks.

Senior Data Analyst (Contract & FTE) — Aviva Canada

05/2008 – 12/2010

Toronto, ON

- Independently designed SAS stored processes to automate loss ratio reports with a user-friendly GUI; created and maintained actuarial data reconciliation processes.
- Provided accurate policy-claims matched data to EEA consultants for risk and pricing model development.
- Created OLAP facts and dimensions tables with SAS OLAP Cube Studio; built Fleet Rate Tracking Report requiring VBA rate deconstruction.

EDUCATION

Master's in Statistics — University of São Paulo, Brazil

Bachelor's in Statistics — University of São Paulo, Brazil

Bachelor's in Mathematics — University of São Paulo, Brazil
