Stripe

Re: Credit Risk Strategy and Analytics

I am excited to apply for the Credit Risk Strategy and Analytics role on Stripe's Capital team. With over 15 years of experience in risk analytics, statistical modeling, and data-driven decision-making across insurance and banking, I am deeply drawn to the opportunity to apply rigorous quantitative skills to shape credit policy at a company defining the future of financial infrastructure.

My background maps directly to this role. I have independently built and deployed a logistic regression risk scoring model for auto policyholders, developed GLMs for property valuation, and partnered with external consultancies on insurance pricing models — all while working closely with senior actuarial and risk leaders. At Wells Fargo and Capital One, I worked on AML, KYC, and CDD risk frameworks, writing complex SQL against massive datasets in Hadoop, Teradata, and Oracle to build risk populations and deliver insights to senior directors. I am proficient in SQL, Python (including PySpark ML for logistic regression and other models), SAS, and Excel — the exact technical toolkit your team uses. I thrive as a self-starter in unstructured, fast-moving environments and have consistently been trusted to manage end-to-end analytical initiatives independently.

I took a brief break from work for health reasons and am now fully ready and excited to return. I am energized by the prospect of joining Stripe's Capital team and contributing to a lean, high-impact organization where analytical rigor and ownership drive real business outcomes.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience in risk analytics, predictive modeling, and credit-adjacent domains can contribute to Stripe's mission. I look forward to speaking with you.

Sincerely,

José R. Sousa
