SUMMARY

Data analyst and quantitative professional with 15+ years of experience in insurance and banking, specializing in risk analytics, statistical modeling, and data-driven decision-making. Proven expertise in SQL, SAS, and Python for extracting and analyzing large datasets, building predictive models (logistic regression, GLM), and delivering risk insights to senior stakeholders. Strong background in credit-adjacent domains including AML/KYC risk management, insurance pricing and reserving, loss analytics, and portfolio performance monitoring. Master's degree in Statistics from the University of São Paulo. U.S. citizen; no sponsorship required.

CORE SKILLS

SQL (Oracle, Teradata, SQL Server, Snowflake, DB2) | Python (pandas, PySpark ML, scikit-learn, REST APIs) | SAS (BASE, STAT, GRAPH, Enterprise Guide, Viya, Proc Report, macros, stored processes) | Big Data: Hadoop, Dremio, Hive, Databricks, Snowflake | Predictive Modeling: Logistic Regression, GLM, Credit Scoring | Excel (advanced, VBA macros) | Power BI | Git | AWS / Azure / GCP (working knowledge) | Statistical Analysis & Risk Analytics

EXPERIENCE

Senior Data Analyst (Contract / Remote) — Wells Fargo

10/2022 – 12/2025

Remote / Hybrid

- Worked on AML / Financial Crimes risk remediations covering CIP, Beneficial Ownership (BO), CDD, and KYC — core credit and risk management functions.
- Built and validated AML remediation populations (Trust, NRM4, transportation assets), creating population identification workbooks and waterfall charts presented to senior directors for approval.
- Wrote complex, optimized SQL queries against Hadoop (via Dremio and Hive), Teradata, Oracle, SQL Server, and DB2 to extract and analyze large risk datasets; served as a go-to technical resource for complex analytical challenges.
- Developed SAS and SQL code to produce ad-hoc, time-sensitive data extracts and reports supporting regulatory compliance and risk decisions.
- Managed and enhanced SAS ETL code producing final remediation artifacts from which refunds and customer letters are issued as required by regulators; reduced defects and improved performance through code optimization.
- Created ETLs mapping execution data requirements (EDR) to data tables; contributed to artifact layout design.
- Used GitHub for version control and DMS as a secure artifact repository; recognized with a full-time offer at project completion.

Data Analytics SQL/Python (Contract / Remote) — Truist

09/2021 – 03/2022

Remote

- Ran SQL queries in Snowflake to extract and analyze data from the enterprise data lake/data warehouse.
- Built a rules-based decision tool in Python to guide compliance and data analysts toward optimal analytics applications.
- Performed reconciliation between ServiceNow/RITM and mainframe data to assess correctness of automated ticket creation, presenting findings to stakeholders via PowerPoint.
- Maintained compliance reports on user access across proprietary applications and data repositories (AD, ACL).

SAS/Python Developer (Contract / Remote) — Florida Blue

04/2020 – 08/2021

Remote

- Extracted data from multiple sources (Oracle, DB2) to create agent fraud detection analytics for the Special Investigations Unit, developing metrics and automated reporting with Proc Report macros.
- Developed and scheduled SAS ETL jobs in Unix; used Python and Power BI to create data visualizations and operational reports.
- Created SAS stored processes for canned reporting and delivered training to team members on stored process design.

Insurance Data Programmer / Data Manager — National General (Allstate)

04/2015 – 12/2019

New York, NY

- Reported to the holding company's Chief Actuary; independently created a logistic regression model to score auto policyholder risk — model was deployed to production.
- Created a GLM to predict bare land value of properties in Orange County, CA.
- Worked on insurance pricing models in partnership with external consultancies.
- Planned and created SAS datasets from Oracle and SQL Server databases to produce actuarial loss triangles used in reserving analyses; reconciled results with the general ledger.
- Created quarterly company-wide YTD summary reports in Excel using GL data to support SEC filings (10-K, 10-Q) and annual report preparation.
- Ran statistical data analyses to track product performance and monitor portfolio trends across lines of business.

Data Scientist / SAS Programmer (Contract / FTE) — AIG

12/2011 – 12/2014

New York, NY

- Architected ETL pipelines extracting data from IBM mainframe (VB/VSAM), DB2, SQL Server, and Oracle; these datasets became the data foundation of the Global Actuarial Pricing department.
- Created SAS macros generating a wide variety of loss triangles to derive LDFs and estimate ultimate claims across multiple lines of business.
- Developed a smart policy-linking algorithm in SAS based on insured and policy characteristics, forming the basis of the Account Quality Index (AQI) credit-like scoring model.
- Collaborated with Deloitte consultants on Commercial Auto pricing tools and Specialty Worker's Comp predictive models, delivering SAS code, data, and model results.
- Conducted deep-dive profitability analyses across lines of business, extracting loss, premium, and policy-level data to generate performance metrics and management reports.
- Fitted logistic regression models using SAS and PySpark ML for risk scoring applications.

Data Analyst (Contractor) — Capital One

01/2011 – 11/2011

Toronto, ON

- Worked on AML efforts including KYC and CDD, using Excel/VBA and PowerPoint as primary reporting tools.
- Created an advanced SAS/GRAPH dashboard running weekly on Unix to monitor web performance metrics distributed to senior stakeholders.
- Built ETL jobs scheduled in Unix to load daily vendor files into SAS and Teradata; created Excel/VBA workbook to automate data retrieval from Teradata and populate PowerPoint AML monitoring decks.

Senior Data Analyst (Contractor / FTE) — Aviva Canada

05/2008 – 12/2010

Toronto, ON

- Independently designed and coded SAS stored processes to automate loss ratio reports with user-friendly GUIs.
- Planned and provided data to EEA consultants for risk and pricing model development, ensuring accurate policy-to-claim matching.
- Created extensive documentation on data and processes; reconciled monthly actuarial data loads using SAS.

EDUCATION

Master's in Statistics — University of São Paulo, Brazil

Bachelor's in Statistics — University of São Paulo, Brazil

Bachelor's in Mathematics — University of São Paulo, Brazil

MBA — EAESP-FGV, São Paulo, Brazil
